Professional Summary

Full Stack Software Engineer with 4+ years of experience architecting and delivering production-grade web and mobile applications for international clients. Specialized in building AI-powered SaaS platforms and two-sided marketplaces using modern technology stacks (React, Next.js, Vue.js, Flutter, Node.js, Python). Proven expertise in integrating LLM APIs (OpenAI, Claude, Gemini) to automate business workflows and drive operational efficiency. Track record of launching scalable applications serving 15,000+ users across diverse industries including education, entertainment, hospitality, and Indigenous commerce. Seeking opportunities to leverage full-stack expertise and AI integration skills to deliver high-impact solutions for forward-thinking organizations.

Education

Bahria University

Islamabad, Pakistan

Bachelor's in Computer Science

2019 - 2023

- Major Course:** Web Engineering, Software Testing, Communication Skills, Artificial Intelligence, Machine Learning, Design And Analysis of Algorithm, Compiler Construction

Punjab College of Information Technology

Rawalpindi, Pakistan

Intermediate in Pre-Engineering from Punjab Board

2016 - 2018

- Graduated with Distinction

Professional Experience

International Clients (Freelance)

Remote - Global

Full Stack Software Engineer | Independent Consultant

February 2023 - Present

- Architected and launched production SaaS platforms and marketplaces for international businesses, managing complete software development lifecycles from requirements gathering to cloud deployment
- Engineered AI-powered automation systems integrating OpenAI, Claude, and Gemini APIs, reducing manual workflows by up to 70% for client businesses in education, hospitality, and entertainment sectors
- Developed full-stack applications using React/Next.js/Vue.js frontends with Python/Flask and Node.js backends, implementing PostgreSQL, Supabase and Firebase databases optimized for scale
- Tech Stack:** React, Next.js, Vue.js, Flutter, Python, Flask, Node.js, PostgreSQL, Firebase, Supabase, OpenAI/Claude/Gemini APIs, AWS, Vercel

CQ Technologies

London, England (Remote)

Full-Stack Software Engineer

February 2022 - December 2022

- Collaborated in agile development team to build enterprise web applications using React TypeScript, Node.js, and PostgreSQL
- Implemented comprehensive test coverage using Jest, improving code reliability and reducing production bugs
- Developed RESTful APIs with Express.js and managed Linux server deployments and automation scripts
- Tech Stack:** React TypeScript, Express, Node.js, Redux, Sass, PostgreSQL, Jest, Ubuntu Linux, Git

Skills

Programming Node JS, TypeScript, Express JS, NextJS, VueJs, Python, TailwindCSS, Material-UI, Firebase, PostgreSQL, MySQL

Miscellaneous DevOps, Linux, Git commands, Anthropic, OpenAI, Webhooks, Automation, Web Scrapping

Soft Skills Project Management, Teamwork, Problem-solving, Documentation, Engaging Presentation, Communication Skills

Projects

Rounddance | Indigenous Business Commerce Platform

Full Stack Developer

- Engineered comprehensive digital marketplace connecting 15,000+ Indigenous-owned businesses with consumers across North America, driving economic growth and cultural preservation
- Architected scalable platform infrastructure supporting business discovery, cultural resource sharing, and community networking features
- Implemented geolocation-based search, multi-category filtering, and business profile management system with admin dashboard
- Integrated secure payment processing and subscription management for premium business listings
- Tech Stack:** Next.js, Node.js, PostgreSQL, AWS, Stripe API

Crewforge | Entertainment Industry Talent Marketplace

Full Stack Developer

- Built specialized two-sided marketplace connecting film and TV crew members with production companies, streamlining the traditionally time-intensive hiring process
- Developed department-based filtering system (Camera, Sound, Production, etc.) with skill-level categorization and availability tracking
- Implemented tiered subscription model with Stripe integration, enabling premium features for both crew members and employers
- Designed real-time notification system for job postings and crew availability updates
- **Tech Stack:** Next.js, Supabase, Firebase, Vercel, Stripe API

Drink-X | Social Discovery Platform for Beverage Enthusiasts

Full Stack Developer

- Created digital platform enabling users to discover, review, and share alcoholic beverages with community-driven ratings and recommendations
- Built dual-interface system serving both consumers (drink discovery) and businesses (venue listings, analytics dashboard)
- Implemented geolocation-based bar and venue discovery with integrated mapping and user check-ins
- Developed crowdsourced rating algorithm aggregating user reviews and generating personalized drink recommendations
- **Tech Stack:** Vue.js, Python Flask, PostgreSQL, AWS, Google Maps API

Nowhow.ai | B2B IT Use Case Platform

Full Stack Developer

- Developed enterprise web platform connecting industry experts, IT solution providers, and SMEs for collaborative use case development
- Architected multi-role authentication system with role-based access control for experts, providers, and administrators
- Integrated AI-powered content recommendation engine to match SMEs with relevant IT solutions and expert consultations
- Built comprehensive admin dashboard with user management, content moderation, and analytics reporting
- **Tech Stack:** Next.js, Tailwind CSS, Node.js, OpenAI API, PostgreSQL

BAIR | AI-Powered Educational Platform for Beaconhouse School System

Full Stack Developer

- Delivered AI-driven SaaS platform automating lesson plan generation, quiz creation, and educational content development for institutional client
- Integrated OpenAI ChatGPT API for subject-specific content generation with automated Google Docs distribution via email
- Developed intelligent chatbot system providing 24/7 teacher support and platform assistance
- Collaborated with educational experts to ensure pedagogical alignment and curriculum standards compliance
- **Tech Stack:** React.js, Node.js, Python Flask, MySQL, OpenAI API, Google Workspace API
